

SRUTHILAYA UMASANKARI SOMA SHANMUGA SUNDARAM

Boston, MA 02120 | (617) 372-1084 | umasankarisomashan.s@northeastern.edu | linkedin.com/in/sruthilaya-sundaram-306 | github.com/ussruthilaya-lang

EDUCATION

Northeastern University

Master of Science in Data Science

Relevant Coursework: Algorithms, MLOps, Essentials of Data Science

Boston, MA

Expected 2027

SRM University

B.Tech in Computer Science

GPA: 3.68 / 4.00

Chennai, India

June 2018 – May 2022

TECHNICAL SKILLS

Programming & Data: Python, SQL, pandas, NumPy

ML & NLP: scikit-learn, clustering, multi-label classification, sentiment analysis, feature engineering, evaluation

LLMs & Applied AI: Transformers (HF), embeddings, RAG (FAISS), prompt engineering, explainable AI

MLOps & Systems: Airflow, MLflow, pipeline orchestration, model monitoring, reproducible workflows

Backend & Prototyping: FastAPI, Flask, Streamlit

Data Storage & Infra: PostgreSQL, MySQL, Supabase, Google Cloud Storage, AWS (Elasticsearch/OpenSearch, S3)

Visualization: Matplotlib, Plotly

EXPERIENCE

Senior Business Analyst, Applied AI & Product Analytics

Jun 2024 – Aug 2025

Sentisum

- Designed and led development of multi-label text analysis systems (50–150+ labels) and LLM-driven workflows for classification, summarization, and custom metrics (CSAT, CES), enabling scalable and business-aligned insights.
- Built hybrid ML + LLM pipelines and unified taxonomies across 8+ data sources, standardizing customer behavior and risk signals for consistent analysis across deployments.
- Owned high-value enterprise accounts (including BFSI), driving pilot-to-paid conversion, identifying expansion opportunities, and delivering measurable product value through data-driven strategies.
- Promoted from Insights Analyst within a short period; recognized as Best New Joiner and took on increased ownership across client strategy, system design, and cross-team collaboration.

Insights Analyst

Oct 2022 – Aug 2023

Sentisum

- Analyzed multi-source customer data (tickets, transcripts, surveys, reviews) using AWS S3 and Elasticsearch to uncover churn drivers and product issues.
- Tuned anomaly detection thresholds and supported product launches by surfacing high-impact issues (e.g., billing errors, platform-specific failures).
- Built dashboards and automated reporting workflows to support product, customer success, and client-facing insights.

PROJECTS

BlueForecast - Demand Forecasting MLOps Platform | Airflow, MLflow, Python

Feb 2026 – Apr 2026

- Built end-to-end forecasting system predicting demand across 500+ stations with automated training-validation pipelines.
- Implemented rollback safeguards and data/model drift monitoring for production stability.

Rubrix - Research Paper Evaluator | Llama 8B/70B, GPT-4o-mini, RAG (FAISS), Python

Mar 2026

- Built explainable LLM evaluation system generating section-level feedback instead of opaque scores.
- Designed cascade inference pipeline routing low-confidence outputs to stronger models, reducing high-cost API calls.
- Replaced black-box grading with traceable evaluation signals, enabling consistent and actionable feedback.

Reputation & Sentiment Intelligence Platform | Python, embeddings, clustering

Dec 2025

- Built modular ML pipeline converting raw reviews into structured issue themes using embeddings and clustering.
- Architected raw vs. derived data separation enabling full pipeline re-runs without data loss.
- Delivered explainable insights dashboard surfacing recurring product issues with supporting evidence.
